Projects

Sporting Event Finder

- **Concept:** A web application designed to find nearby major sporting events. Mainly created using HTML, CSS (Materialize), and JavaScript.
- Implemented Ticketmaster API to return nearby events to the user as well as handling ticket purchasing.
- Utilized Google API to track user's current location and for weather forecasting.

Employee Database

- **Concept:** A back end-based application that allows users to track, organize, and add employees.
- Created database using MySQL that stores employees and their roles.
- NodeJS handles the server-side data.

Manual Find

- **Concept:** A community-driven web application allowing users to upload/download PDF files of old manuals not common found online.
- App created using React library and stylized with Bootstrap.
- Integrated Firebase to handle authenticity, database storage, and other server-side data
